G & G Electronics, Inc. is a full service, licensed, low-voltage integration company that was incorporated on February 10, 1976. For over 38 years, G & G Electronics, Inc. has provided needs assessment, design, installation, and service of customized commercial communication and security systems. We have built our reputation and loyal customer base on providing superior products and services, focusing on excellent customer service and systems integration.

We specialize in critical commercial communication systems that include:

Nurse call systems in hospitals utilizing PoE to interface with automatic tracking, infant security, wireless pocket paging, tablets, and telephones. Integrated nurse call communications benefit staff efficiency, staff-to-staff communication, and staff-to-patient communication with improved exit scores from the patients.

Voice over IP intercom systems in schools, utilizing PoE technology to provide district-wide communication in the event of an emergency, with lock-down capabilities, classroom check-ins, bell scheduling, bell and clock synchronization, and audio systems. Communication systems produce benefits in emergency response, event management, and everyday communication on a district, campus, and classroom level.

Addressable, intelligent fire alarm systems, with or without voice evacuation, for any commercial or industrial facility to provide facility notification and evacuation of a fire event. There are times when mass notification systems are integrated with the fire alarm system to provide facility-wide emergency audio and visual notification in the event of an emergency. Fire alarm and mass notification systems direct emergency response, evacuation, and communication that could save lives.

Other integrated systems:

Access control systems utilized to integrate with closed-circuit television, human resources, and facility security team to provide facility-wide access control and security. Our security systems produce benefits in maintaining staff and building

safety, minimizing loss associated with human resources, mechanical failure, or theft.

Video surveillance systems utilizing the leading designer and manufacturer of commercial grade advance video surveillance systems and software applications to provide reliable, high quality, best-in-class components; accessed seamlessly across all major platforms with standard menus for ease of use.

Professional audio/visual systems utilizing name-brand manufacturers to design, provide, and install the specified requirements to include classroom audio system with projectors, conference systems, professional sound for all applications, distance learning, CATV, and MATV systems.

Public address systems in any commercial or industrial facility, utilizing commercial audio equipment manufactured by leading audio companies to provide the desired coverage and specified need of each individual owner. Our public address system systems improve communication, staff efficiency, and production.
